In the interests of user-safety (Required by safety regulations in some countries) the set should be restored to its original condition and only parts identical to those specified should be used.

CE

This equipment complies with the requirements of Directives
96/57/EC, 89/336/EEC and 73/23/EEC as amended by 93/68/EEC.

DESTINATION ..... E

Refrigerant; HFC-134a
Refer to "HFC-134a COOLING UNIT" Service Manual for handling this refrigerant.

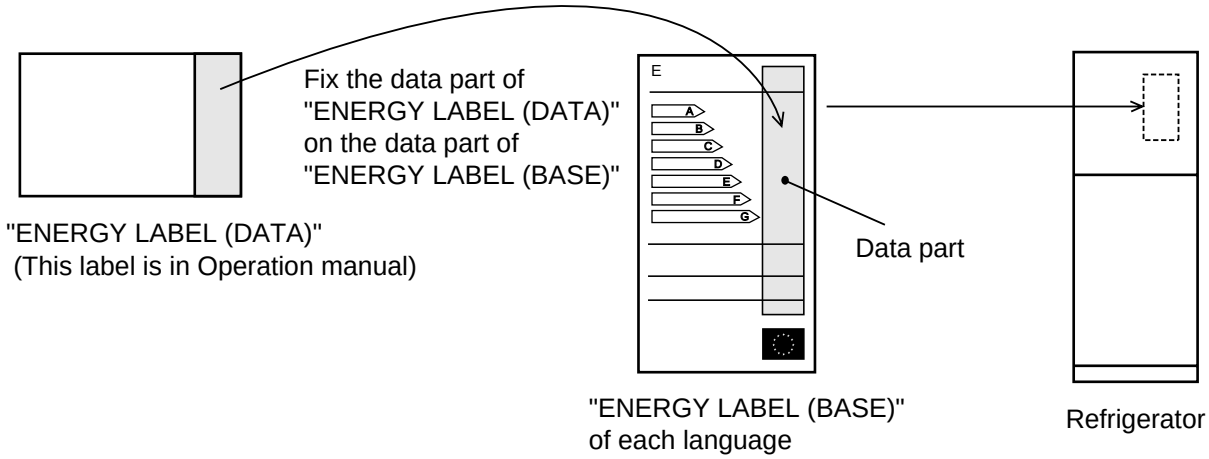
ENERGY LABEL

Usage of "the ENERGY LABEL"

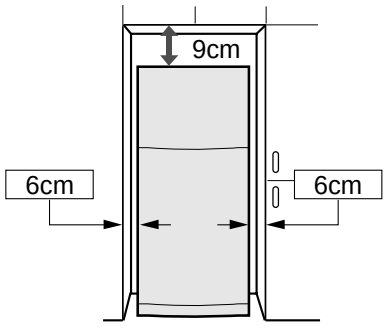
When displaying this refrigerator in the shop-window, attach the "ENERGY LABEL" to it in the following procedure.



INSTALLATION

Free standing type

To ensure adequate ventilation for this refrigerator, install with 6 cm space at the rear and both sides, with a minimum space of 9 cm above the refrigerator.



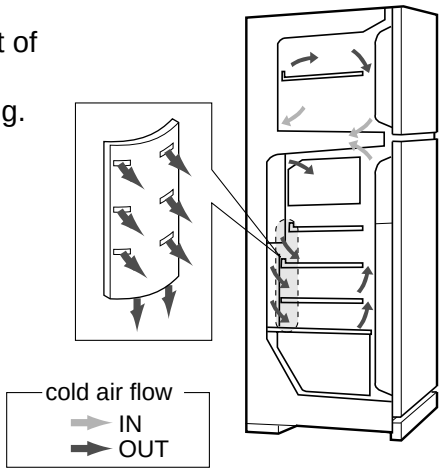
- This refrigerator shall be used under the ordinary place condition between +5˚C and +38˚C of ambient temperature, and also not be left under -10˚C for long days.
- To be used this refrigerator within the range of the rated voltage±6%

CAUTIONS AND INFORMATIONS

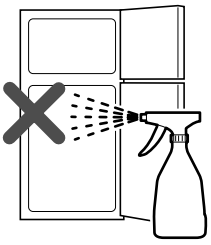
In case of following troubles, the cause is not related with the failure of refrigerator.
Please mention the correct way to the customer for the use of refrigerator when the repairing.

1. Some foods freezed in the refrigerator compartment.

Do not place food directly in front of cold air outlet.
This may lead to the food freezing.



2. Some plastic parts were cracked or splitted.



Some household cleaning chemicals may affect the internal food liner and plastic parts resulting in splitting or cracks occurring.
When cleaning all plastic parts inside this refrigerator, only use diluted dishwashing liquid(soapy water). Make sure that all plastic parts are thoroughly rinsed with water after cleaning.

3. IT IS NORMAL for the refrigerator to produce the following sounds.

Cracking or crunching sound;
Sound produced by expansion and contraction of inner walls and internal parts during cooling.
Squeaking sound;
Sound produced by expansion and contraction of internal parts.
Sound of flowing fluid (gurgling sound, fizzing sound);
Sound of refrigerant flowing in pipes (sound may become louder from time to time).

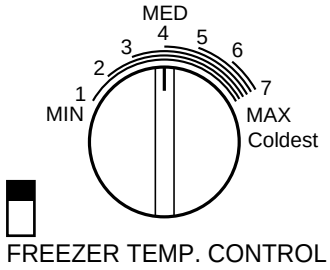
FUNCTIONS

1. ADJUSTABLE TEMPERATURE CONTROL

(1) Temperature control of freezer ✱★★★

- Thermostat (senses freezer temperature) operates on ON/OFF switchover to control the compressor and cool air circulating fan (F-fan motor) , and allows the freezer temperature to keep at a suitable temperature.
- However adjust the freezer temp. control knob as follows depending upon the storing condition of foods.

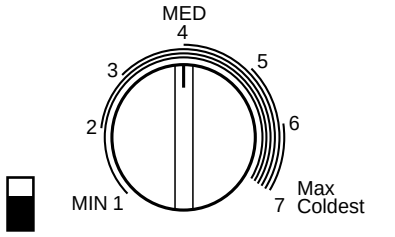


KNOB SETTING	PURPOSE
MAX(Coldest)	● For making ice rapidly or fast freezing.
⬆	● When restocking with fresh food.
MED	● For normal freezing.
⬇	● For storing frozen food for a short period (up to one month).
MIN	● When frozen food or ice cream is not stored.

Figure F-1. 2 star section ★★ for storing frozen food only.(not freezing)

(2) Temperature control of refrigerator

- Damper-thermostat senses temperature of the refrigerator and changes the opening angle of the damper automatically.
  However, as the Damper-thermostat has no function to switch on or off the compressor and F-fan motor, the freezer temperature control causes temperature in the refrigerator to vary to some extent.
- However, adjust the refrigerator temp. control knob as follows depending upon the cooling condition.



KNOB SETTING	PURPOSE
MAX (Coldest)	● For keeping freshness of food longer.
⬆	● When the refrigerator does not provide sufficient cooling.
MED	● For normal operation.
⬇	● When the refrigerator provides excessive cooling.
MIN	

Figure F-2.

- When the temperature of the refrigerator is higher, R-fan thermo. senses the temperature and the refrigerator is cooled efficiently by running of R-fan motor.
  R-fan thermo. heater energizes when the door is opened intend to promote to running of R-fan motor.

NOTE:
- The refrigerator temperature is affected also by the freezer temperature. If the freezer temp. control knob is set at the position "MAX", the temperature tends to be lower than the following values, and if set at near the position "MIN", temperature tends to be higher.
- If the refrigerator is operated for a long time with the freezer temperature control sets the "MAX" position, foods stored in the refrigerator compartment may also freeze.
- When refrigerator temperature control sets to the "MAX", some foods stored may freeze. In this case adjust control set back to the "MED" position.
- When refrigerator temperature control sets to the "MAX", some foods stored in fresh case may also become frozen.

(3) Reference value of temperature

SETTING OF FREEZER TEMP. CONTROL KNOB	MAX (Coldest)	MED	MIN
Freezer temperature ✱★★★	Approx. -21℃	Approx. -18℃	Approx. -15℃
2 star section temperature ★★	-15℃	-12℃	-9℃

SETTING OF REFRIGERATOR TEMP. CONTROL KNOB	MAX (Coldest)	MED	MIN
Refrigerator temperature	Approx. 0˚c	Approx. 3˚c	Approx. 6˚c
Fresh case temperature	Approx. -3˚c	Approx. 1˚c	Approx. 4˚c

The values shown above refer to the case where the freezer temp. control knob is set at "MED".

The values shown above refer to the measurement carried out center area and 1/3 of overall height from the bottom at each of the refrigerator and the freezer after machine has been operated at an ambient temperature of 30˚C with no food stored and the door closed until the temperature is stabilized.
The values vary depending upon frequency of opening and closing the door, ambient temperature, amount of stored foods and manner of storing foods.

2. DEFROSTING

(1) No defrosting operation is necessary

No defrosting operation is necessary.
As this machine is so designed that a built-in evaporator cools air and a fan circulates cooled air, neither the freezer nor the refrigerator is frosted, though the evaporator is frosted.
The frosted evaporator is defrosted automatically due to the function of defrosting timer and heater, requiring no defrosting operation.

(2) Where is melted frost brought

1. Melted frost is brought into the evaporating pan at the bottom of the set and is evaporated here by the heat of sub condenser.
2. Be sure that the evaporating pan is inserted correctly and is level.

(3) The following circuit diagrams in the table show automatic defrosting function of the refrigerator with timer and defrost thermostat.

Operation	Electric diagram	Description
1. Cooling (Normal)	● Defrost thermostat ON ● Compressor running ● Timer motor running  **Figure F-3.**	The integration timer integrates running time of the compressor. When it reaches cycle time of defrost timer, the timer contact is changed to start defrosting.
2. Defrosting (Time 20 to 30 min.)	● Defrost thermostat ON ● Compressor stops ● Timer motor stops  **Figure F-4 .**	● The timer contact is changed to start defrosting, the timer motor stops, and power is supplied to the defrost heater. ● It takes about 20 to 30 min. to defrost. When little frosted, the defrosting takes little time. When much frosted, the defrosting takes much time.
3. Drain (Time approx. 5 min.)	● Defrost thermostat OFF ● Compressor stops ● Timer motor running  **Figure F-5.**	When the defrost thermostat becomes OFF, the timer motor starts running. During the operation time (delay time of defrost time) defrosted water is drained outside the refrigerator.
4. Restart (Time approx. 5 min.)	● Defrost thermostat OFF ● Compressor running ● Timer motor stops  **Figure F-6.**	● Timer contact is changed to cooling operation and the compressor starts running and the timer motor stops. ● Defrost thermostat contact becomes ON when it's cooled. And the timer motor starts running. (Figure F-3.)

(4) As a reference to determine the causes of trouble, malfunction and phenomena are described below. Refer to the following when repairing.

1. Disconnection of defrost heater
As off-cycle defrosting is performed, the defrosting time is extremely prolonged. Each time defrosting is started, the freezer temperature rises and a portion of ice and stored foods are melted.

2. Melted thermo. fuse or opened-circuit due to the defect of defrost thermostat.
When the above mentioned trouble occurs in cooling operation, the timer motor does not run, defrosting will not take place, and consequently freezing is caused. In the above mentioned condition, when the timer shaft is turned by hand to defrost, the timer motor runs during the operation time. However, the motor stops from the time when the contact is changed, and freezing causes.

NOTE:
- As the thermo. fuse assembly is intended to prevent dangers, do not use it under shorted condition even for a short period.

3. DEW PREVENTION

The hot pipe, namely D.P.-condenser, is arranged around the flange part of cabinet and the C-partition plate, preventing dew from being generated on the cabinet.

NOTE:
- D.P.-condenser pipe may be felt hot if touched by hand while the compressor is in operation.
- If you are asked about this, please explain that the hot pipe serve to prevent the dew generation.

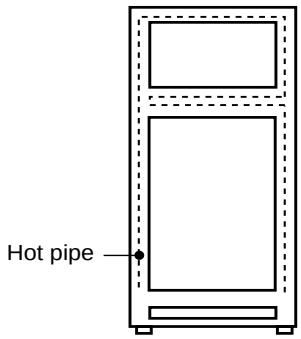


Figure F-7

4. INSPECTION OF INITIAL STARTING

(1) Inspection of cooling unit

1. Set the temperature control knob to "MAX" and check that the compressor starts to operate.
2. Depress the door switch to run the fan and check that cool air is blown out of the cold air outlet of the freezer and the refrigerator.
3. When the compressor does not work, check that the timer is not set to "defrost" position.
4 It takes about an hour and a half or two hours to put food in the refrigerator after starting operation.

NOTE:
- After return the temperature control knob to "MED" position.
- When the refrigerator is operated initially after installed, the compressor may vibrate excessively for 1 to 2 min. However, vibration becomes normal if it is continuously operated.

(2) Inspection of defrost device

Operate the refrigerator for 20 to 30 min. and then check the defrost device in the following procedures :
Allow 5 min. to restart the compressor since immediate starting after stopping will cause unsmooth operation.

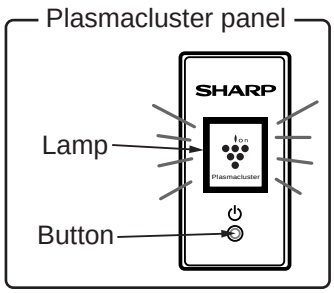
1. Turn the timer shaft clockwise with a screw driver.
   At this time, make certains the timer clinks and the compressor stops.
2. After more than 5 min., turn the shaft further to operate.
   Make certain cooling operation is started again.

5. PLASMACLUSTER (Only for SJ-P58M,P63M,P68M)

(1) Plasmacluster is what thing.

The ionizer inside the refrigerator will release cluster ions, which are collective mass of positive and negative ions, into the the freezer and refrigertor compartments.
The cluster ions reduce airborne fungus.

(2) Plasmacluster Panel



1.When the refrigerator will be operated, the Plasmacluster lamp of the panel will ight up.

2.By pushing the button, the lamp gose out or lights up.

3.Under the lamp is lighting, Plasmacluster operation is controlled as follows.

(3) Plasmacluster Control.

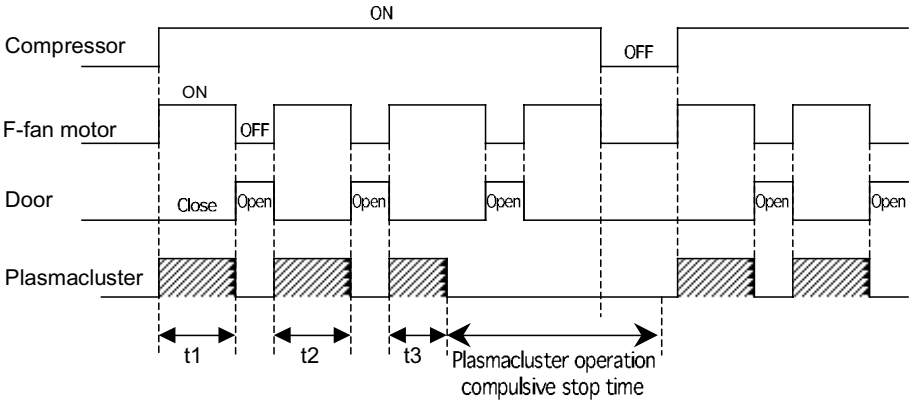
1.Plasmacluster operation will be performed when the following conditions gather.

1) Lamp : Under lighting
2) Compressor : Under operation
3) Door : Closed
4) Within "The Plasmacluster operation time".

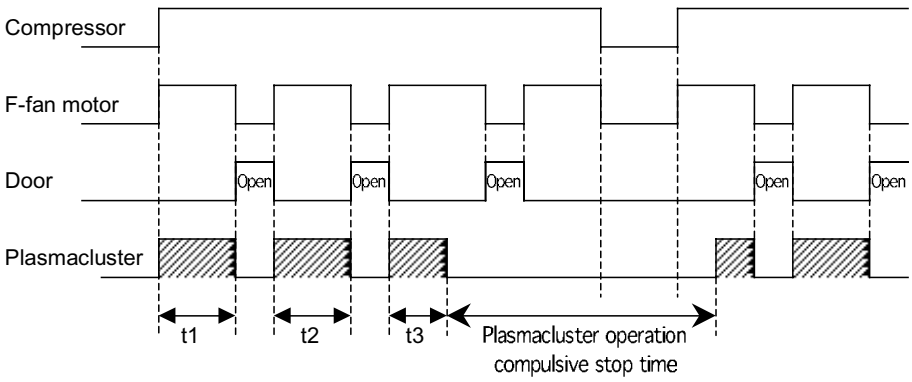
2.If the sum total of Plasmacluster operation time will reach at the set time ("The Plasmacluster operation Time") , Plasmacluster operation will stop.

3.After an operation stop, the Plasmacluster will be not operated during the set time ("The Plasmacluster operation compulsive stop time") .

Time chart A



Time chart B



● The Plasmacluster operation time = t1 + t2 + t3

ASSEMBLING PROCEDURES OF MAIN PARTS AND CAUTIONS

CAUTION: DISCONNECT THE UNIT FROM THE POWER SUPPLY BEFORE ANY REPAIRING.

1. R-CONTROL COV. ASSEMBLY

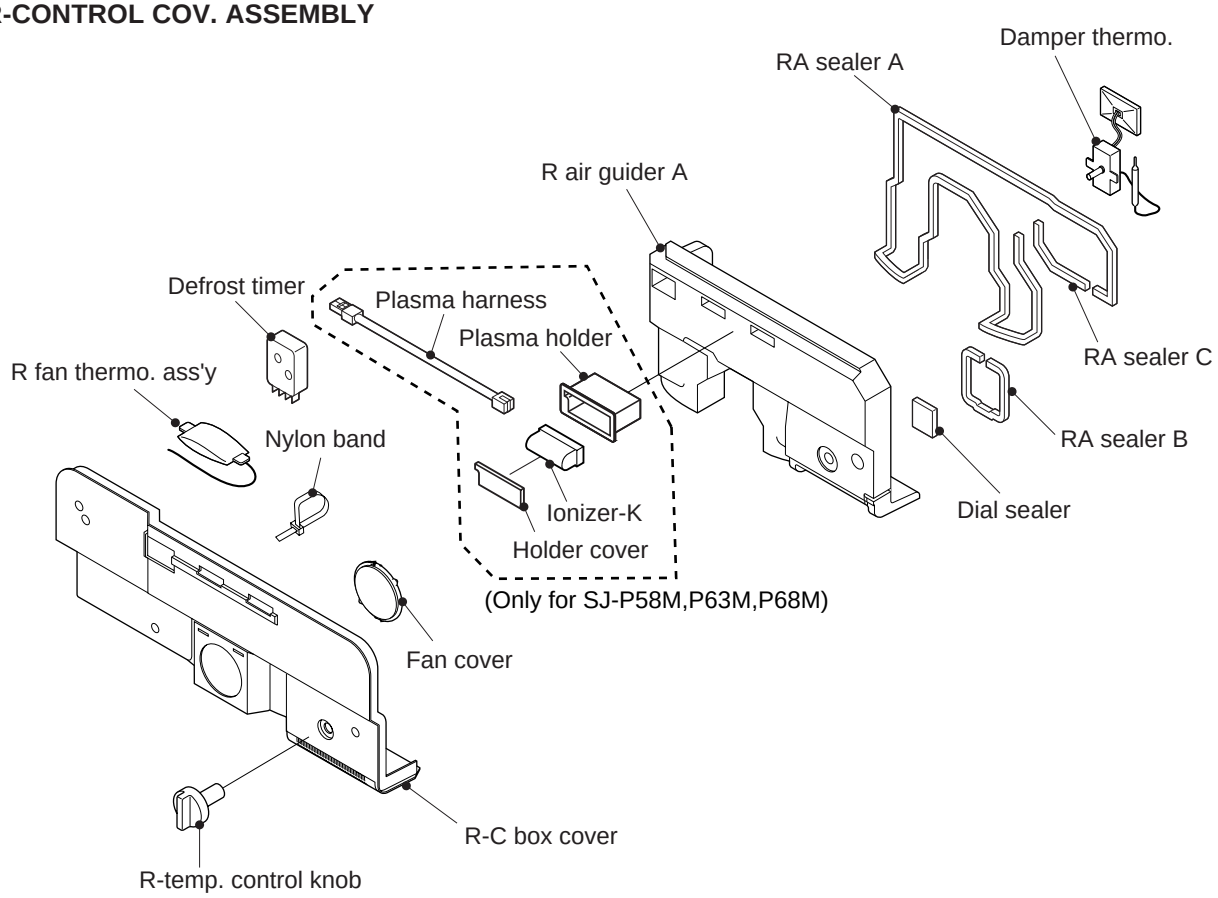


Figure A-1

(1) Forming sensor of Damper thermo.

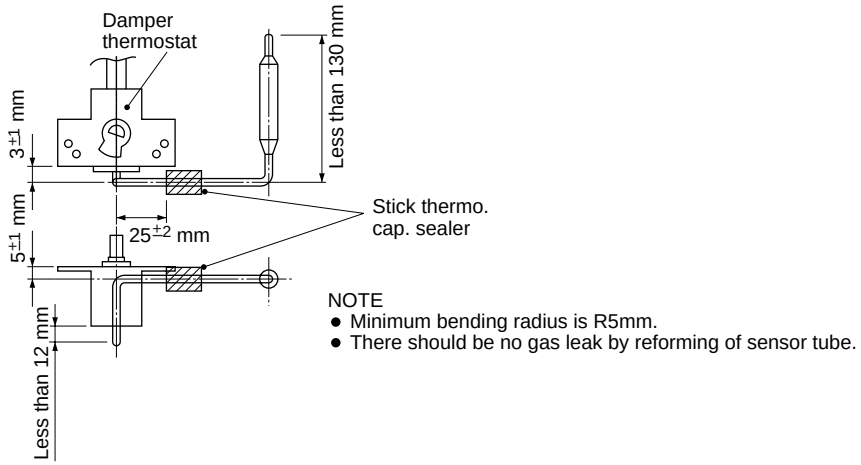

Figure A-2

After forming, fix it to the refrigerator.

(2) Sticking of sealers to R air guider A.

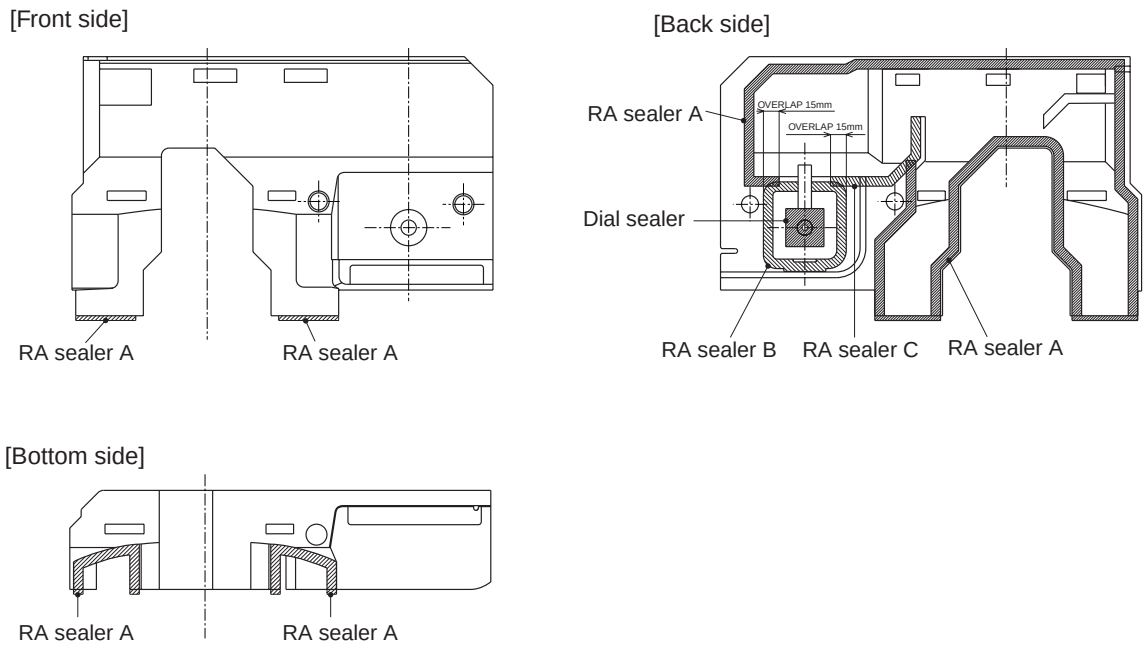

Figure A-3

(3) Fixing of the Ionizer-K.(Only for SJ-P58M, P63M, P68M)

(3)-1 Connect Ionizer-K and connector of the lead wire.
(3)-2 Insert Ionizer-K to Plasma holder.
(3)-3 Insert the (3)-2 assembly to R air guider A.
(3)-4 Insert Holder cover to (3)-3 assembly and fix by the paper tepe.

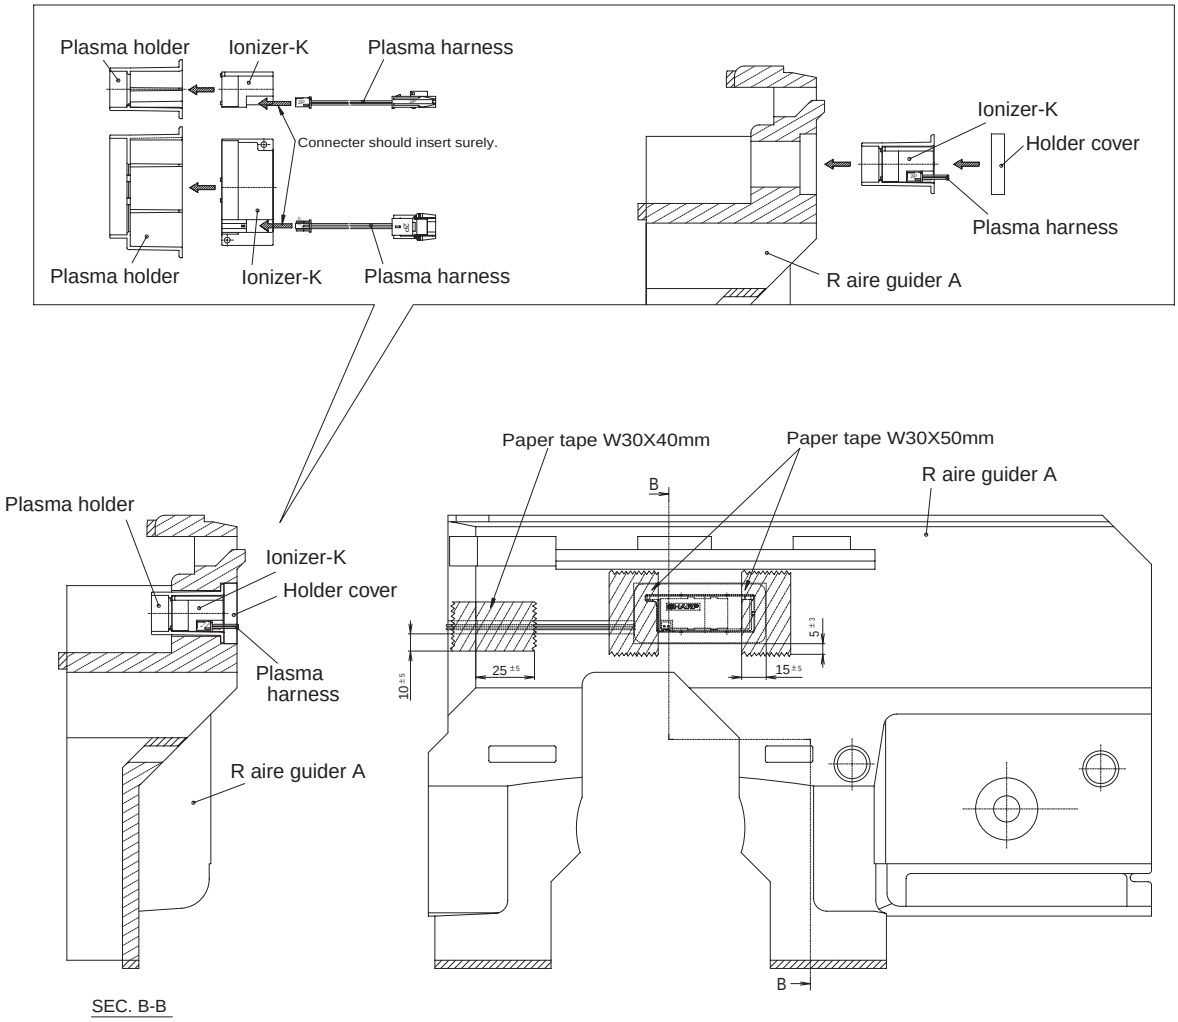

Figure A-4

(4) Fixing of Defrost timer, R fan thermo. ass'y cover to R-C box cover.

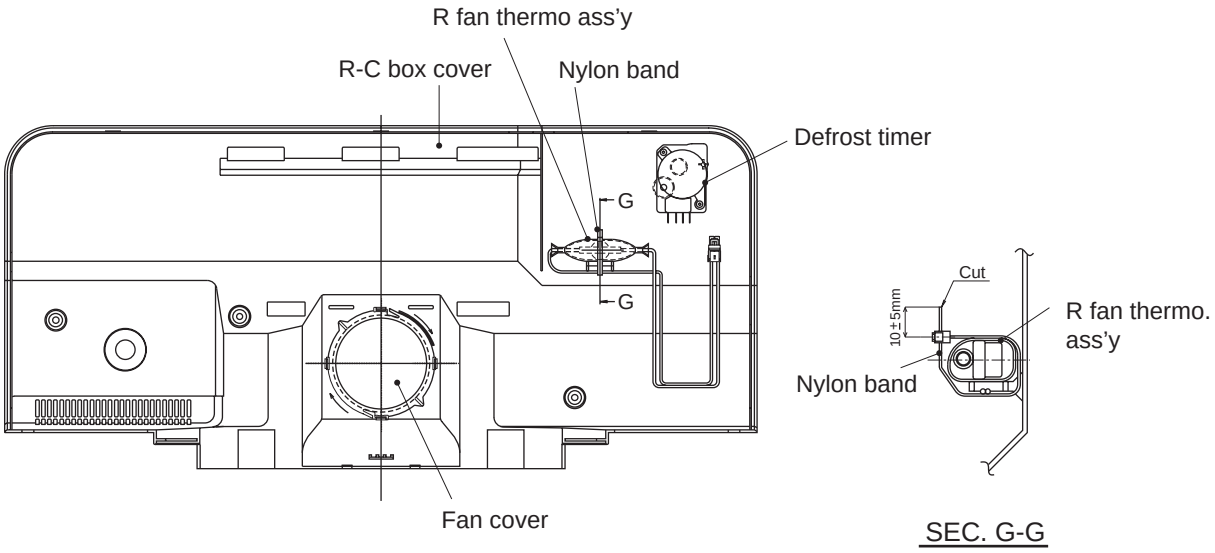

Figure A-5

2. R LAMP BOX ASSEMBLY

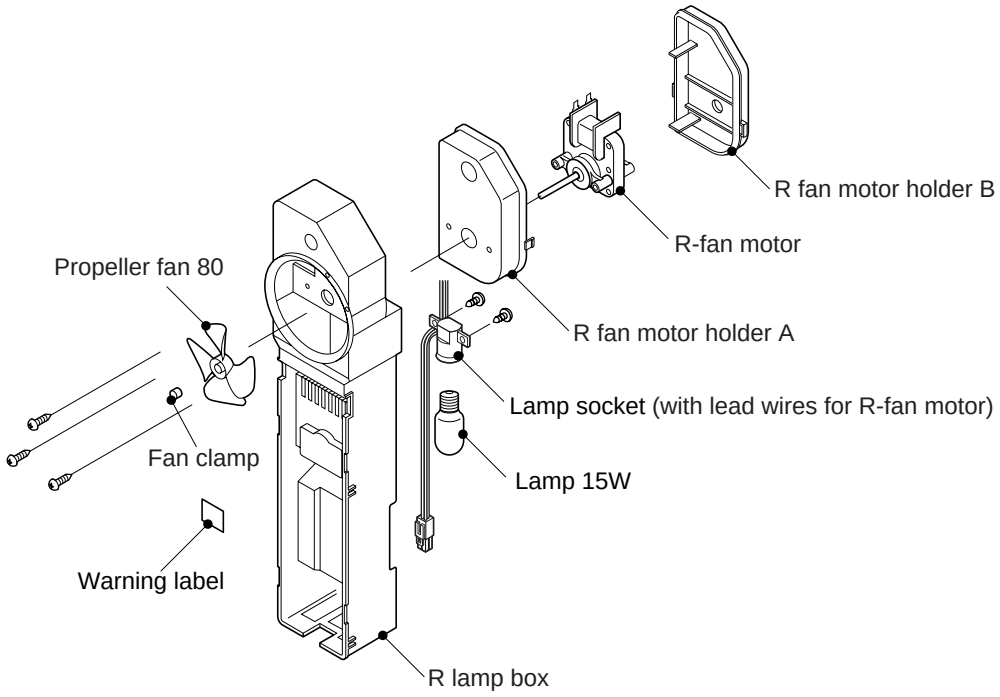

Figure A-6

(1) Fixing of Lamp and Lamp socket.

(1)-1 Screw Lamp 15W into Lamp socket.

(1)-2 Fix Lamp socket on R lamp box by tapping screws.

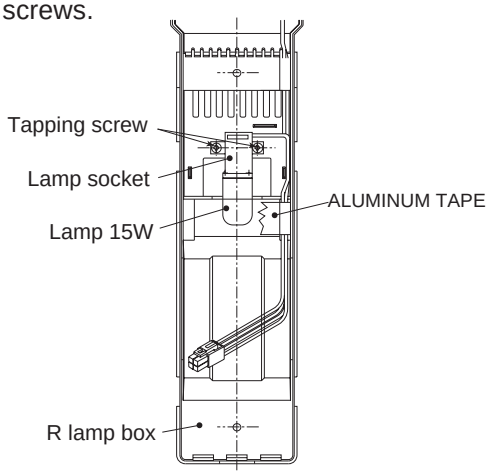

Figure A-7

(1)-3 Insert the terminal of Lamp socket to R-fan motor.

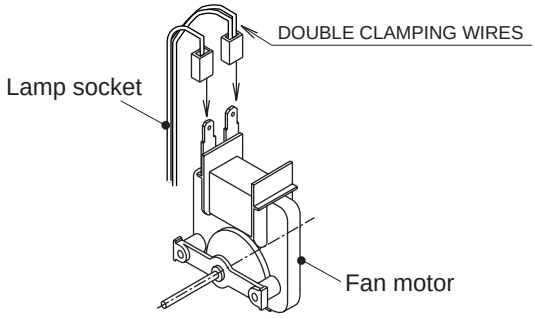

Figure A-8

(2) Fixing of R-fan motor and Fan

(2)-1 Set R-fan motor holder A to R lamp box by tapping screw.

(2)-2 Set R-fan motor to R fan motor holder A by machine screw.

(2)-3 Set R fan motor holder B to A.

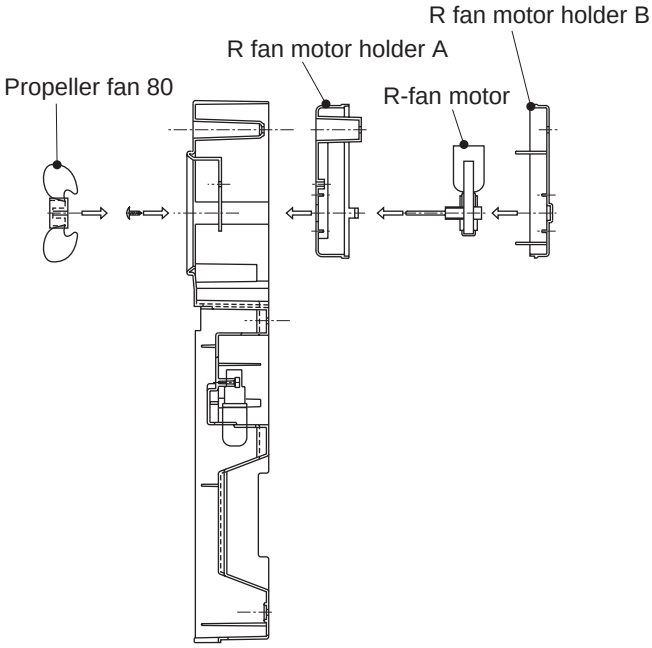

Figure A-9

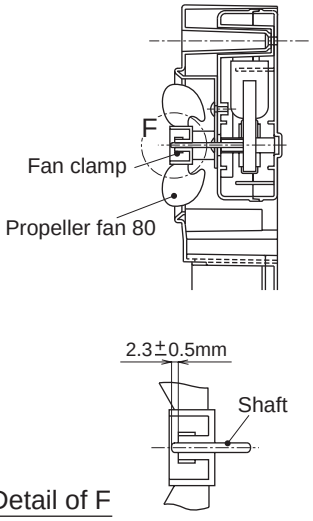
(2)-4 Set Fan clamp to Propeller fan 80 and insert it to the shaft of R-fan motor.



Detail of F

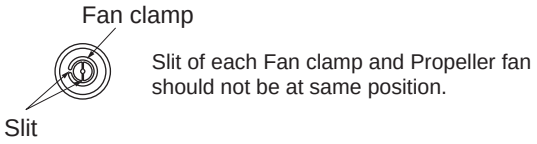


Figure A-10

(3) Sticking Warning label.

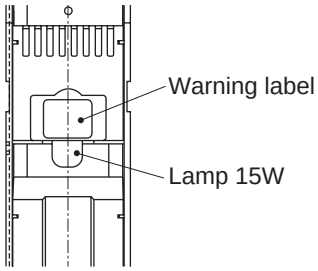

Figure A-11

3. E.V COVER ASSEMBLY

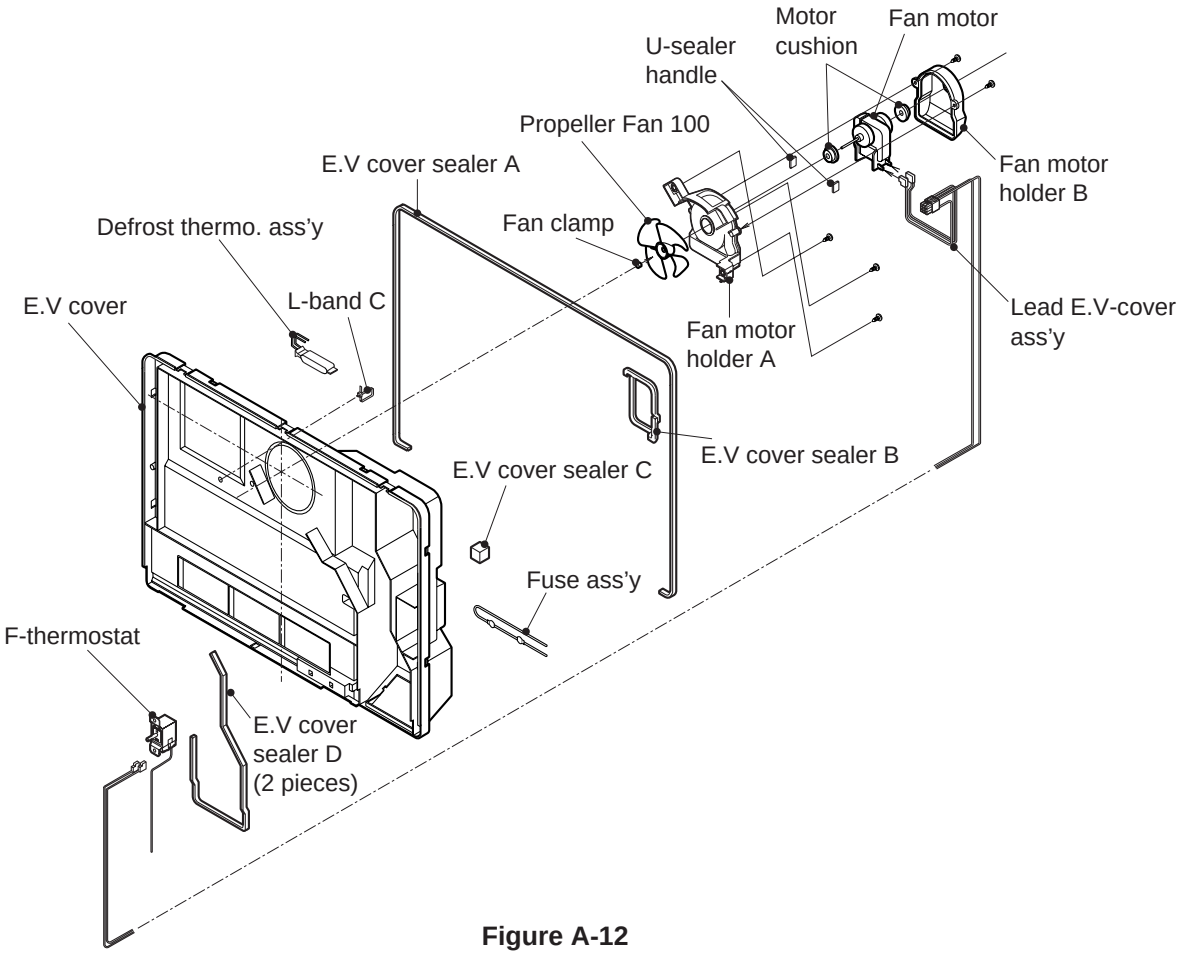

Figure A-12

(1) Sticking of Sealers to E.V cover

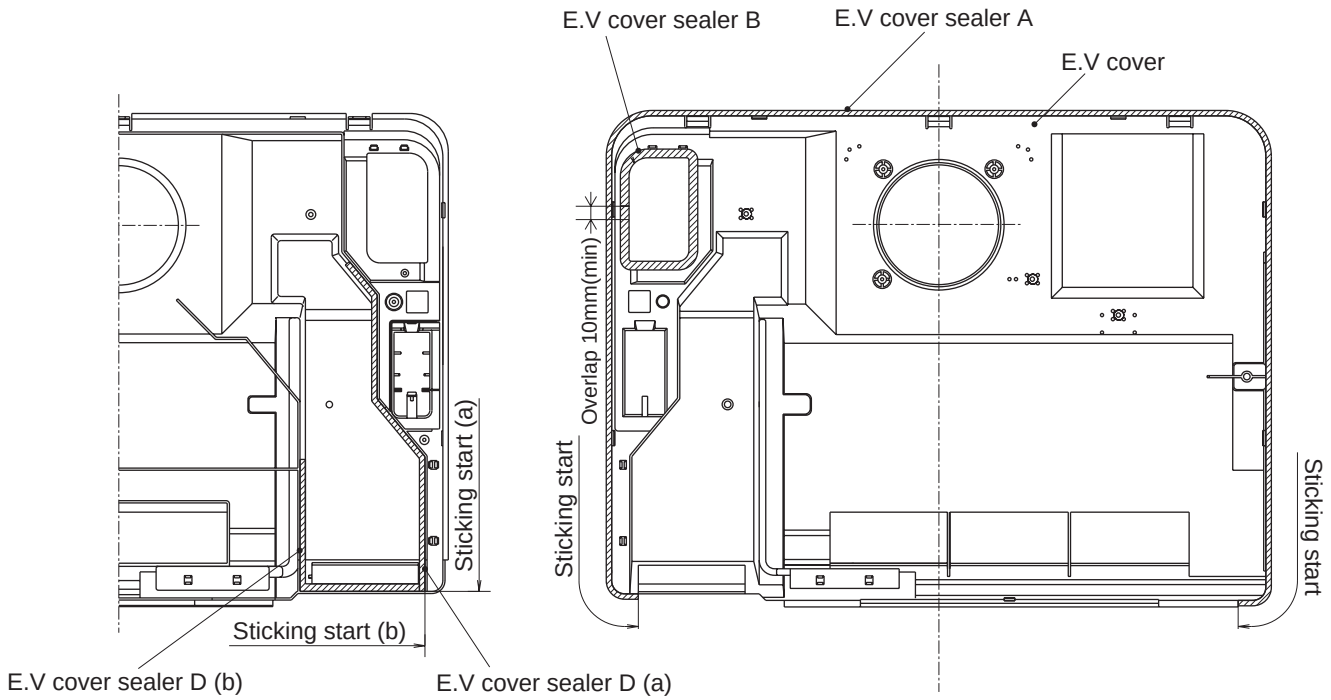

Figure A-13

(2) Fixing of Fan motor and Fan

(2)-1 Stick U-sealer handle to Fan motor holder A.

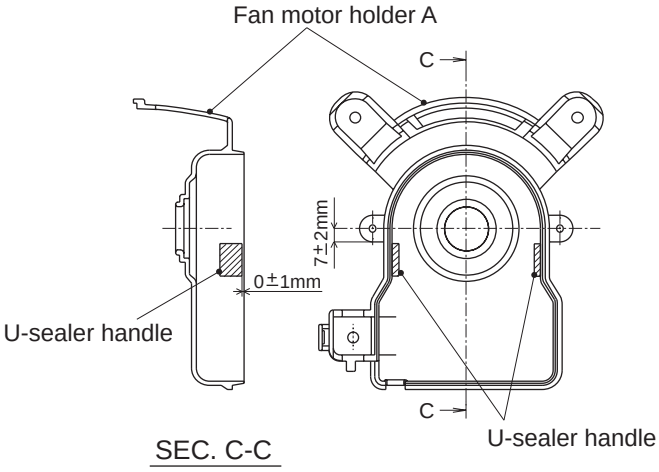

Figure A-14

(2)-2 Insert the terminals of Lead EV-cover ass'y to R-fan motor.
(2)-3 Fix two Motor cushions to R-fan motor, and set it at Fan motor holder A and B.
Then fix with Tapping screw.

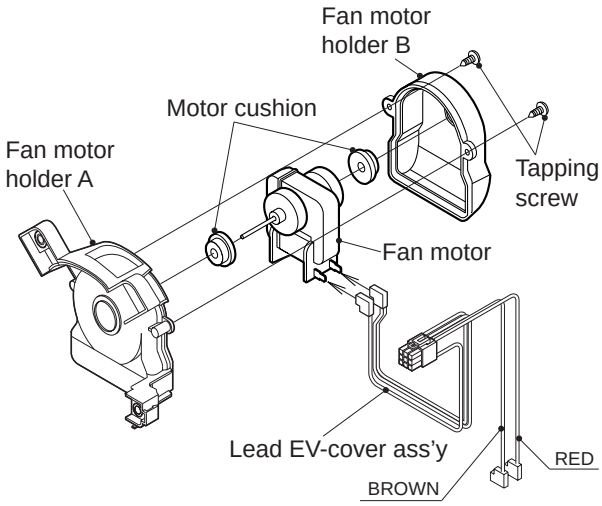

Figure A-15

(2)-4 Set Fan clamp to Propeller fan 100 and insert it to the shaft of Fan motor.

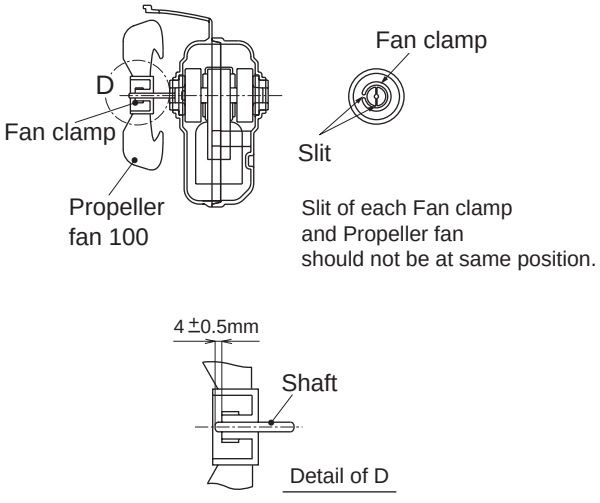

Figure A-16

(3) Setting of Fan motor ass'y , Defrost thermo. ass'y and Fuse ass'y

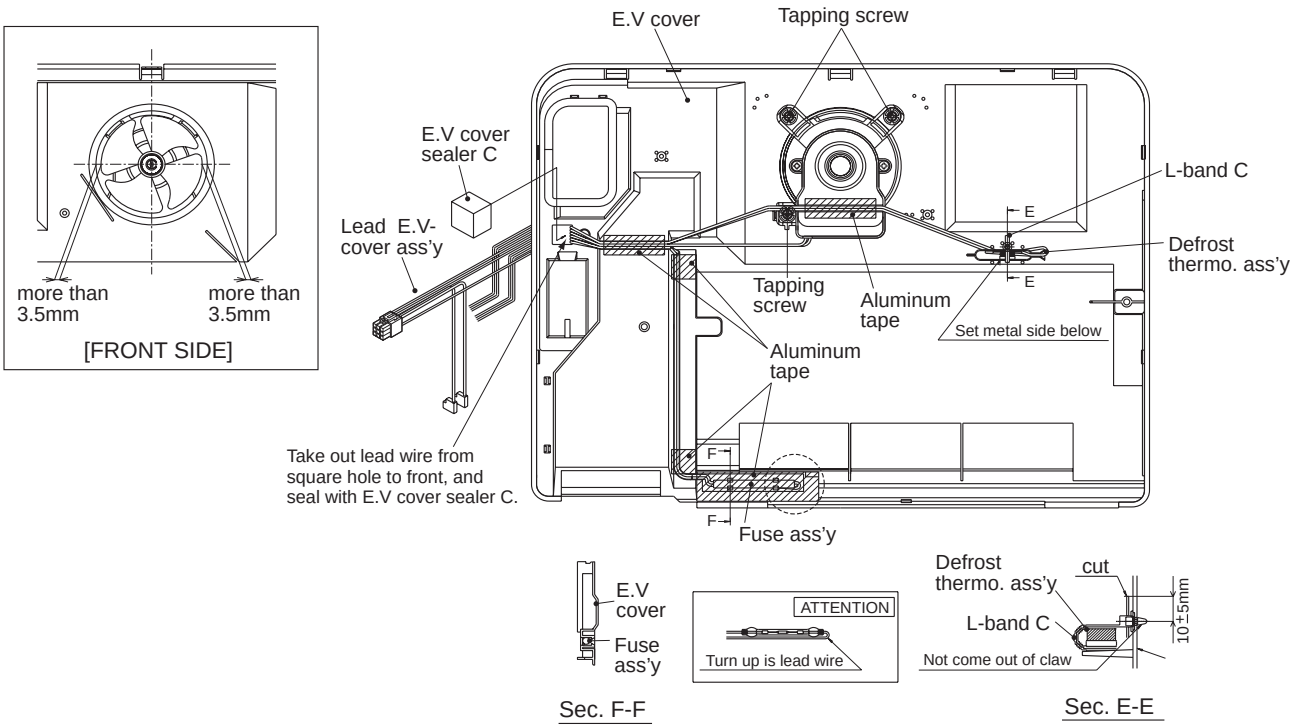

Figure A-17

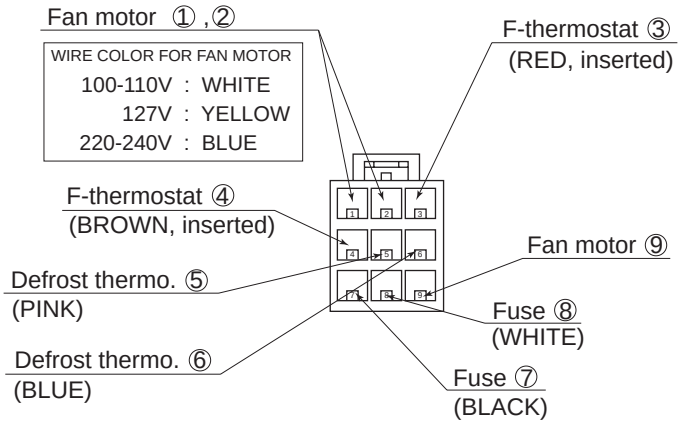
(4) Inserting of pins



Note • Pins should be inserted surely, and check by pulling it.

Figure A-18

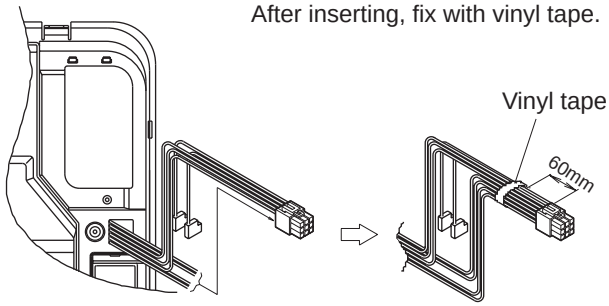


Figure A-19

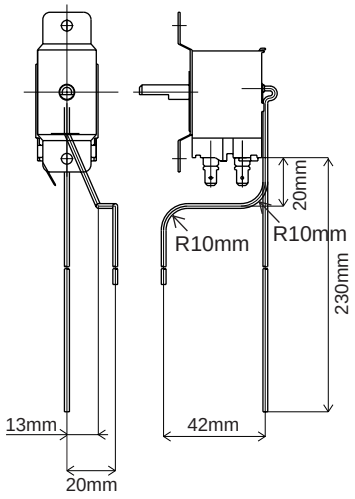
(5) Setting of F-thermostat

(5)-1 Form capillary tube of F-thermostat.



Note

- Bending radius of capillary tube should be from R5mm to R10mm.

Figure A-20

(5)-2 Insert terminal of Lead EV-cover ass'y.

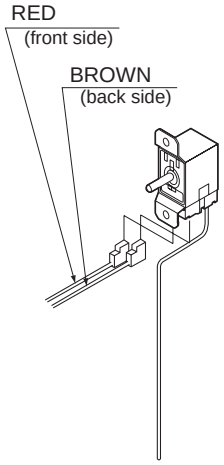


Figure A-21

(5)-3 Set to E.V cover.
